Our award winning authentication solution protects access to all of your data, whether on-premise or in the Cloud. AuthControl Sentry is available as a Cloud service, solving even more business challenges irrespective of the size of your organisation.

## Business Benefits:

### Maximise Security

Our Cloud service applies our intelligent authentication approach to security and access. All the authentication factors available to on-premise customers, are now available via the Cloud, utilising Mobile Apps, Hardware Tokens, SMS, Voice, and Image-based challenges.

### Highly Flexible

Simple integration with existing infrastructure. Allows you to maximise the value of your existing security solutions; utilising industry standard integrations with RADIUS, SAML or ADFS.

### Rapidly Scalable

Ability to add/remove users at will, go from 25 users to 25,000 in minutes. Hosted on the highly scalable and resilient Amazon AWS platform. Their data centres allow Swivel Secure and their customers to choose where their data and software will be hosted.

### Cost Effective

No upfront capital expenditure and a range of commercial models available.

### Productivity Gains

Moving to AuthControl Cloud allows your staff and infrastructure teams to focus on your core business, and leave the running of your security solution to the experts.

### Future Proof

AuthControl Cloud is kept up to date by our experts at Swivel Secure, ensuring you benefit from the latest enhancements, and services, without having to plan complex upgrades.

## Key Features:

### Dedicated offering

At Swivel Secure we like to share and co-operate, however, where our software and your data is concerned we like to keep things separate, segregated and secure. AuthControl Cloud provides a dedicated virtual machine for each customer. There are no shared, multi-tenanted options available as we believe security should be at the forefront of our service.

### Private Firewall

Dedicated and independent firewalls for each customer, allowing tailored security and ACLs.

### Fixed IP

Each AuthControl Cloud customer receives a dedicated fixed IP for their own virtual instance, and the control and security that provides. No shared resource, no shared API, and no shared entry portal. Our customers are unique with their own requirements, and we believe a Cloud service should be too.

### Mobile Platform

Seamless integration with AuthControl Cloud, allowing fast and easy deployment

### Simplified Administration

With our expert team maintaining the infrastructure, the only thing left to manage are the integrations, policies and users. All administration is via our simple to use, and comprehensive GUI.

### 24/7 Support

Swivel Secure provides 24/7 support for all Cloud customers, the specific SLAs are available on our website.

### AD Integration

Access to internal systems is via our AD Agent, a locally installed software application, that removes the requirement to share your AD across the Internet, whilst maintaining user account synchronisation.

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.
