Swivel Secure Limited and protectONE agree on close co-operation for tokenless Authentication solutions

Warstein/Harrogate 05.05.2009

Swivel Secure Ltd., leading vendor for tokenless authentication solutions, today announces the sales partnership with protectONE.

Swivel inserts itself smoothly into the safety environment of enterprise companies. Banks and other organisations, which are dependent on safe and efficient authentication systems, are able to utilise the advantages of the SMS Authentication and/or an uncomplicated online user authentication.

PINsafe is patented multi-factor authentication technology, which ensures a safe and simple Authentication for all sizes and kinds of enterprises completely without tokens.

"With the partnership of Swivel we can offer efficient and, at the same time, compatible solutions for enterprises, which have a high level of security structure", says Rafael Gödde, Managing Director from protectONE.

"Thanks to the partnership with Swivel, as a specialist for authentication systems WITHOUT tokens, we can meet the challenge of the strongly rising demand of the market for reliable and manageable solutions", says Rafael Gödde. "With Swivel's Multi Factor Authentication you are able to get the one time code (OTC) either by SMS or via a pixel picture together with the Login Screen. A patented simple extraction method is used during this. The original PIN number is never transferred directly. In addition, if there is the highest Security requirement, you can use PositiveID. With this technology we read out the PC/Laptop ID, so that the PC/Laptop will be the Token itself. We are convinced we have found the optimum partner with Swivel", says Rafael Gödde.

"This partnership is an important step to strengthening the position of the leading technologies of Swivel in the central European market. In protectONE we have a strong partner for the German market, which has the experience of many years in the IT Security arena", says Tom Selhorst, Director Central Europe at Swivel

"Our goal is to enhance the market with our products for safe and simple administration Authentication solutions in Germany", explains Tom Selhorst. "The cooperation with protectONE is an important strategic step, because we can offer our customers even more comprehensive Multi factor Authentication".
